Topics

- Significance and motive behind the app
- Ways of storing user data (databases such as AWS)
- Application Features
- Future meeting schedule (every 2-weeks)
- Collaborative learning of Swift language through a Udemy iOS development course

Meeting minutes: 22 minutes

Methods to track open actions: Work breakdown structure shows a time schedule of tasks to be completed for the Fall semester. Our main priority is getting our Udemy course for iOS development up and running (finishing the first 5 modules) and then some UI/UX design alongside (tangent with the Concept Generation assignment). The work breakdown report shows the start and end date for our tasks as well as weekly tasks to be done by the entire group. No changes of tasks since last submission.
